

## Research Analyst

We are seeking research analysts for our research offices in Russia to analyze the fundamental and financial information of companies and to build proprietary databases to facilitate quantitative investment research.

### Job Responsibilities (include, but not limited to the following):

- Automation of day-to-day data processing tasks
- Analyzing various types of information about companies
- Providing support for decision making to efficiently procure and deliver relevant company information
- Monitoring and parsing of information about companies, e.g. comments by analysts, news, or discussions on social media
- Collecting macroeconomic data to build in-house databases
- Adjusting fundamental/financial data based on sector and industry conventions

### Job Qualifications:

- Bachelor's degree or above from a reputable university in Computer Science, Mathematical Economics or other quantitative discipline
- Knowledge and/or work experience in the finance industry, especially with exposure to the capital markets
- Programming experience with Python
- Fluent in written English
- Good interpersonal skills and team player mentality
- Strong work ethic and drive to succeed

### Additional Preferred Qualifications:

- Programming experience with C++
- Knowledge about accounting (especially US GAAP)
- Knowledge of databases (both relational and unstructured data)
- Experience at a commercial financial data provider
- Experience in equity research (particularly global equity)
- Experience with Big Data
- Ability and willingness to quickly learn new application areas

Position based either in Moscow / Saint Petersburg

Interested and qualified candidates please email your current CV (or any questions) in ENGLISH to [hr-confidential@worldquant.ru](mailto:hr-confidential@worldquant.ru)
